

Supplemental Figure 11

Supplemental Figure 11. Quantification of murine plasma neurofilament (NFL) levels in an orthotopic mouse model of the human DAOY-GFP cell line, treated with NT or CAR.GD2 T-cells. NFL was measured by ELISA assay at day 37 and day 58 post T-cell infusion. Mouse#2 (triangle) and mouse#3 (circle) were marked in red. Data are shown as average $\pm$ SD. Two-way Anova was used as multi comparison test. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.
