

Supplemental Figure 6

A

B

Supplemental Figure 6. CAR.GD2 T-cells spare the elimination of MB cells with a dim expression of GD2. GD2+ DAOY-GFP MB cell line was seeded alone or co-cultured with NT-T or CAR.GD2 T-cells for five days at the E:T ratio of 1:1. **(A-B)** The residual GFP+ tumor was analyzed by FACS and expressed as percentage of residual GFP+ tumor **(A)**. Residual tumor cells have been characterized for GD2 expression **(B)**. Exemplificative experiment is shown.
