

Supplemental Figure 7

Supplemental Figure 7. Inhibition of EZH2 with Tazemetostat upregulates GD2 expression in MED-411 FHTC (G3 subgroup) MB cells. (A) Representative flow-cytometry analyses of GD2 expression (percentage and MFI) in MED-411 FHTC cell line treated with 1 or 10 μ M of Tazemetostat for 7 days. DMSO vehicle was used as negative control. Data are representative of the GD2 percentage (B) and MFI (C) in three replicates of MB MED-411 FHTC cell line pre-treated with 1 or 10 μ M of Tazemetostat for 7 days. Values are represented with box and whisker plot showing: the minimum value, first quartile (bottom horizontal line), median, third quartile (upper horizontal line) and the maximum value. Data are expressed as average $\pm$ SD. Two-way Anova was used as multi comparison test. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, **** p -value <0.0001 .
