

Supplementary Figure 5. Binding of cetuximab on the surface of EGFR-expressing cancer cells co-cultured with ACE2016. ACE2016 and un-conjugated $\gamma\delta 2$ T cells were co-incubated with EGFR-expressing HCC827 cells, and cetuximab bound on the surface of HCC827 cells was detected using anti-F(ab')₂ antibody by flow cytometry after 3 hours of co-incubation. The fold change of mean fluorescence intensity of anti-F(ab')₂ antibody in HCC827 cells of the co-culture groups was relative to the alone group (baseline as 1).
