

Supplementary Figure 3. No significant immune response when co-culturing ACE2016 with PBMCs from healthy donors. ACE2016 was co-incubated with PBMCs from healthy donors ($n = 4$) at a ratio of 1:1 in the presence and absence of anti-CD3/anti-CD28 beads (Gibco) for 2 and 6 days. Phytohaemagglutinin M (PHA) stimulation was used as the positive control to activate PBMC cytokine production. The supernatant from each condition was collected, and the levels of IL-2 and IL-4 at Day 2 and IL-6, IL-8, IL-10, TNF α , and IFN γ at Day 6 were analyzed using the LEGENDplexTM Magnetic Bead Panel Kit (BioLegend) according to the manufacturer's instruction.
